About Us

Blits Proof Group Limited is a full service company, providing bespoke security system solutions to a wide range of clientele throughout Kenya and the greater East African region. We are committed to you in the strategic design and seamless execution of innovative, state-of-the-art technology security systems that are delivered within budget and agreed time scales. All our security systems and installations are globally accredited coupled with professional support from our international infrastructure partners.

The outstanding professional experience delivered by Blits Proof Group Ltd through its directors, management team and core personnel is based on international and domestic military special operations tactics from years of service in the field. We have the resources and experience in providing specialized security systems services to all sectors of the market across Kenya and East Africa.

Our professional team selects appropriate locations as to where our equipment is to be installed rather than leaving that burden to the customers, for example in case of security installations, we select which places in the building or within the organization are prone to threats and need constant surveillance and then only after the customer's satisfaction about the place, we go on with the installation. We understand your needs and act appropriately.

Our Vision

To be the provider of choice of specialized security systems and installations to organisations, earning recognition for high ethical standards, values, professionalism, and personalised high-quality services.

Our Mission

To provide our clientele with superior service that is in line with their ever-changing security and protection needs

Key Success Factors

In order to ensure focus and clarity in everything we do, we have four crucial success factors: quality, business development, brand, and people. All activities within Blits Proof Group Ltd serve the development of at least one of these KSFs. This way we ensure that we always remain focused on working toward our vision.

- **Quality** - "Quality is the absolute cornerstone for Blits Proof Group Limited"

- **Business Development -** "It is vital to strengthen our client base"

- **People** - "High quality professionals attract high quality clients"

- **Brand/profile** - "A strong, regionally recognised brand is critical to our success"

Our Solutions

We offer a wide array of security systems and installations that leave you with a variety to choose from based on your specific needs.

Perimeter Protection

Our electric fence solutions offer the following benefits

- Advance notice of intrusion that activates the alarm upon violation, causing the intruder to retreat.
- The presence of an electric fence deters intrusion.
- You are able to detect where and when an intrusion has taken place from the main control panel with our multi-zone systems.
- Violation / intrusion of the perimeter fence can automatically turn on floodlights
- In case of power failure, there is a back-up battery that runs the system for up-to 14 hours (more if required).

Automatic Gates

Automatic gates are used to control access into a secured area. Most commonly, automatic gates are used at the entrance to the facility, and are used to control vehicular access on and off of the site. For example, a manufacturing plant may use an automatic gate at its main entrance. They are of various types such as:

a. Slide Gate

The slide gate is mounted parallel to the inside of the fence and slides horizontally back and forth across the gate opening. The slide gate uses rollers on the bottom of the gate to support it. Slide gates are sometime also called "rolling gates" or "V-track gates"

b. Swing Gate

Swing gates are most commonly used in residential applications because of their low cost and ease of installation. Because swing gates travel over a large arc, space must be available to allow vehicles approaching the gate to remain clear while the gate opens or closes.

c. Bi-folding Gate

Bi-folding gates consist of two gate panels that are hinged together. When activated, these gate panels fold back onto themselves to allow access. Bi-folding gates require only a small footprint and are often a good choice when space is limited. Many bi-folding gates have relatively fast opening and closing speeds.

Bollards

We install rising and fixed bollards ideal for your specific needs. Our bollards are globally sourced and meet top notch safety requirements.

Road Blockers

Road blockers are designed especially for entrance points which have a threat of vehicle attack or for the ones that have high security requirements. If there is a threat of vehicle attack in addition to the control of vehicle access in high security applications, hydraulic road blockers are the unique solution and the most secure systems

Under Vehicle Surveillance System (UVSS)

Our UVSS solutions are designed to scan, monitor, and digitally record crisp, clear digital video images of the entire width of a vehicle's undersides - all with one permanent or portable system. It's an ideal solution for governmental, military, corporate, and transportation facilities - wherever complete vehicle monitoring is required.

Barriers

This category includes:

a. Boom Barriers

Our Automatic Boom Barriers offer efficient security at exit and entry points of factories, office complexes, condominiums, parking lots, toll plazas, or any roadway entry where medium to heavy traffic is expected. The boom barrier is aesthetically designed with sleek and modern looks. Features of the boom barrier include an inbuilt anti-crush safety device, which suspends the motion of the boom, should it meet any obstruction

b. Spike Barriers

The spike barrier is designed to offer protection in both directions on entry and exit. The compact design allows for the minimum of excavation work and simplifies the installation.

Parking Management System

Our parking management system uses the latest global technology and provides efficiency. This includes:

- Parking System With Ticket - Manage and make faster the entry/exits as systematically.
- Parking System With Ticket and LPR
- Parking System With LPR
- Parking Guidance System

Portable Explosive Detector

The portable explosive detector is small enough to fit in your cargo pocket, but rugged enough for use in the real world. With the portable explosive detector, the collector handle and cover prevent user contamination, so you can have confidence in the results. With exceptional threat recognition and superior throughput, this product offers outstanding detection, performance, and reliability across the spectrum of customs, ports, and border control applications.

Pedestrian Security Screening

We have the most advanced systems at cost effective prices. All our screening equipment is compliant with global standards. There is also a lease option to cater for your immediate needs and temporary situations such as during events. The equipment includes:

a. Walk through metal detectors

b. X-ray baggage scanners

C. Hand-held metal detector

CCTV and Intruder Alarms

Blits Proof can provide customized CCTV solutions for your office, home, commercial property or compound. Current advancements of communication infrastructure have opened up a new world of CCTV remote surveillance. We specialize in CCTV installation of systems ranging from analogue cameras to large scale High Definition IP camera application. Our alarm systems are activated when an electrical circuit is broken or motion is detected. It can even be integrated with video surveillance and other security systems, enabling a coordinated response between cameras, motion detectors and intruder alarms..

Biometric Access Control

Biometric Access Control system is the use of unique physical characteristics to identify an individual to deny/grant access to users. Biometric security systems are particularly recommended where high security is necessary, requiring an irrefutable method of authentication for access control e.g. in airports, military bases, police, hospitals, banks etc.

Access Control

Full Height Turnstile

Speed Gates

Revolving Door

Half Height Turnstile

Man Trap

Access Control

Turnstiles provide superior access control by both detecting and deterring unauthorized entries. Unlike doors, turnstiles can limit the number of people who can enter or exit on each presented credential and control the direction of passage. In order to enter through a turnstile, a person must first present a valid credential.

Bullet Proof Vests and Helmets

Our Bulletproof Vests and helmets offer excellent light weight ballistic protection against a spectrum of ballistic threats. We strive for the same things you look for when it comes to protective gear. We maintain the highest standards and guidelines for all bulletproof vests and helmets for quality delivery.

Bullet Proof Panels

We supply ArmorCore® bullet resistant fiberglass panels, manufactured by Waco Composites, which deliver superior security against bullets and blast fragments. Our product variety offers ballistic resistant panels in 8 different levels of protection: Level 1 – Level 8. Each level is rigorously tested to meet or exceed UL specifications for that specific level. All levels are UL certified and come backed with our warranty.

Video Management System & Analytics (VMS)

The video management system is an essential part of any surveillance system. It allows you to manage camera and recording settings, view multiple camera feeds, and set alerts for tampering and motion detection. The VMS can analyze your recorded video, giving you important information. These can range from retail software that tracks customer movements to motion detection searches for suspicious people who came on your property.

Building Management System (VMS)

Building management systems are computer-based systems used to monitor and control building services such as:

- Lighting.
- Heating, ventilation and air conditioning (HVAC).
- Fire, smoke detection and alarms.
- Motion detectors, CCTV, security and access control.
- ICT systems.
- Lifts.
- Industrial processes or equipment.
- Shading devices.
- Smart meters.

Safe Haven

A safe haven/safe room is a shelter, detached or built within a structure that is strong enough to provide safety from any or all catastrophic events. The type of event you want to be safe from (e.g., a weather event, a terrorist event) will determine the specifications of the safe room. We comply to specifications and guidelines set by the International Code Council. The support structure of this room will be either steel beams or bricks and concrete blocks

ARMORCORE   THE WINDOW FILM COMPANY   Fibrolux   Burglar Bomb Security Systems   SmokeCloak   ASSA ABLOY   THIRDEYE

RF Communication Equipment

We specialise in all aspects of Two Way Radio Communications including:

- Two way Radio Sales, Repair & Service
- Walkie Talkie and System Hire
- Two Way Radio System Design along with Aerial Infrastructure
- Two Way Radio System Installations
- IT Equipment
- Guyed Mast towers

Key Benefits to Clients

The benefits that our clients enjoy while utilizing our services are;

- Cost efficiency and flexibility.
- Highly specialized services.
- Continuous Improvement through our value added services
- Understanding of the diversity in client tastes and preferences.
- Routine follow-ups and checks

Network Solutions

We provide tailor-made networking solutions to businesses in all kinds of industry. They include:

- Data Centres
- Servers
- Switches
- Cabinets
- Storage & Backup
- PABX

Fire Equipment & Fire Alarm Systems

Fire detection and fire-fighting equipment designed to keep people and property from the adverse effects of uncontrolled fire:

- Smoke Detectors
- Fire Alarm Systems
- Hose Reels
- Fire Blankets
- Fire Pumps
- Fire Extinguishers

Electrical Installations

We install electrical systems for businesses, commercial buildings and residential homes.

- UPSs
- Generators
- Solar Systems
- Electrical Fitters

Professional Affiliations

- Member of Protection and Safety Association of Kenya (PROSAK)
- National Construction Authority Certification

Our Capabilities

- Comprehensive market reach across Kenya, Uganda, Tanzania, Somalia, Tunisia, South Sudan and Morocco through Al Thuraya Consultancy
- Ability to not only install but design systems through Al Thuraya Consultancy
- Industry expertise
- Exclusive network of contacts in commercial and government organization in the region
- Cordial working relationships and all-inclusive front collaboration with law enforcement agencies
- Trained trainers
- State of the art equipment
- Internal strategists
- Partnerships with external and global infrastructure suppliers
- Solid financial base

Vision Attainment

In order to actualize our vision we:

- Strengthen client loyalty by delivering outstanding value and ensuring customer satisfaction.

- Become a one-stop shop for all customized security systems and installations under one roof.

- Continually enhance our corporate image to project quality and innovation.

- Create unprecedented opportunities for all shareholders, partners and employees.

- Establish value networks with key infrastructure players such as Samsung, Whiterose, Total Security and Hikevision to reinforce our value and quality
